## General information

We are pleased to inform you about the feature enhancements published in Release 5 of the LSDS platform. We are constantly making improvements so that our customers always benefit from up-to-date software. Some of the changes are directly visible on the LSDS platform, others are more in the background to enhance performance and ensure up-to-date security standards.

Next is a graph displaying the connections between the LSDS platform modules. On the next pages, you will find the new features for each of the 4 modules in the graph.

## LSDS Platform - Customer specific Marketplace

### [PO template](#)

**Relevant for:** Customer using direct access

Adding additional variables to the purchase order template.

### [Order List enhancements](#)

**Relevant for:** All customers

Additional fields and improved handling for the order list transfer.

## LSDS Platform - Inventory Manager

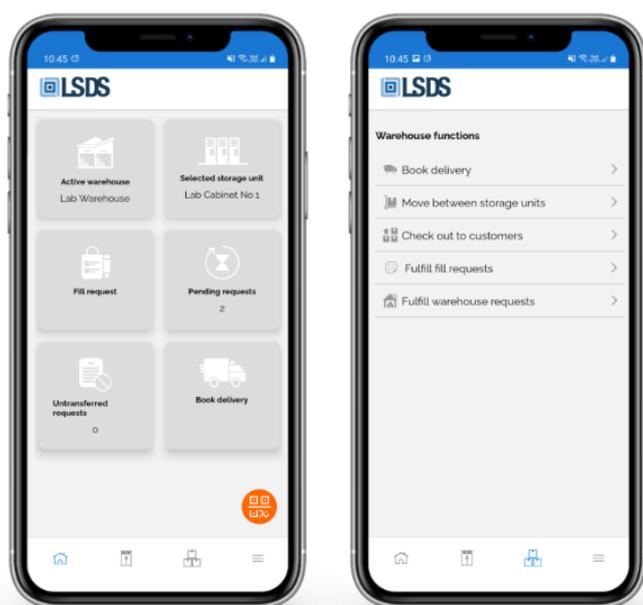

### [UI improvements mobile app](#)

**Relevant for:** Customers who have subscribed to the Inventory Manager module

Updated version of mobile app for iOS and Android including additional tiles for Untransferred requests and Book delivery on landing page and the introduction of a new menu for warehouse functions.

#### [UI Improvements Mobile App](#)

---

### [Support of offline mode](#)

**Relevant for:** Customers who have subscribed to the Inventory Manager module

The mobile application of the inventory manager supports the creation of fill requests if the mobile device is currently not connected to the Wi-Fi or the mobile network.

### [Warehouse functions](#)

**Relevant for:** Customers who have subscribed to the Inventory Manager module

Introduction of the warehouse functions in the mobile application of the inventory manager.

### [UI improvements web app](#)

**Relevant for:** Customers who have subscribed to the Inventory Manager module

Enhancing the web application of the inventory manager with reset filters, additional reports, printing, etc.

### [UOM handling](#)

**Relevant for:** Customers who have subscribed to the Inventory Manager module

Including units of measure to transaction log and reporting.

## LSDS Platform – Marketplace Manager

### [Simultaneous use of OCI/cXML connection](#)

**Relevant for:** Customers using multiple procurement systems

The simultaneous use of multiple connections allows a customer to use multiple procurement systems at the same time.

### [Long text transfer](#)

**Relevant for:** All customers

The transfer of the long text to the procurement system can be switched on and off on supplier level to allow additional data to be transferred to the procurement system.

### [Multivendor for external webshops](#)

**Relevant for:** All customers

In case an external webshop (aka punchout catalog) uses multiple vendors, the vendor ID can be transferred back to the procurement system to split the requisitions and purchase orders to the separate vendors.

## LSDS Platform – Platform Manager

### [Catalog upload handling](#)

**Relevant for:** All customers

Speed up large catalog upload and resume functionalities in case of upload exceptions.

### [Impact Analysis](#)

**Relevant for:** All customers

Create an impact analysis to check catalog updates for unreasonable or uncontracted price updates. General overview of impact of a catalog update compared to previous spend.

### [Price History Tracker](#)

**Relevant for:** All customers

Display of historical price update over the lifetime of a product.

### [Event Log archiving](#)

**Relevant for:** All customers

Improvement of event log archiving and other operational data.
